

3DS Server

Advanced authentication for a safer,
more efficient payments ecosystem

evertecinc.com

• 3DS Server

Advanced authentication solution that enables the issuing bank to validate the cardholder's identity before authorizing an online purchase, adding an extra layer of security that strengthens trust in digital payments.

→ *Standard security protocol*

Key benefits for your business

- ✓ **Significantly reduces fraud,** minimizing financial losses and reputational risk
- ✓ **Decreases chargebacks,** facilitating dispute management
- ✓ **Increases the authorization of legitimate payments,** strengthening end-user trust
- ✓ **Simplifies regulatory compliance,** optimizing processes and costs
- ✓ **Enables seamless and secure payments,** enhancing the customer experience

3DS Server

Strengthens trust in online payments

- ✓ Seamless local and international compliance (PSD2, SCA)
- ✓ Shifts validation to the card issuer, enabling more accurate and secure decision-making throughout the purchase process
- ✓ Enhances the checkout experience in low-risk transactions through frictionless (no-challenge) authentication
