

3DS ACS

Smart authentication that protects
every digital payment

evertecinc.com

3DS ACS

Protect every digital transaction with real-time authentication

This solution validates the cardholder's identity in eCommerce payments and keeps the issuing bank at the center of security.

It uses modern methods such as OTP and biometrics to dynamically authenticate, reduce fraud and chargebacks, and deliver a secure, frictionless payment experience.

A solution that makes a difference

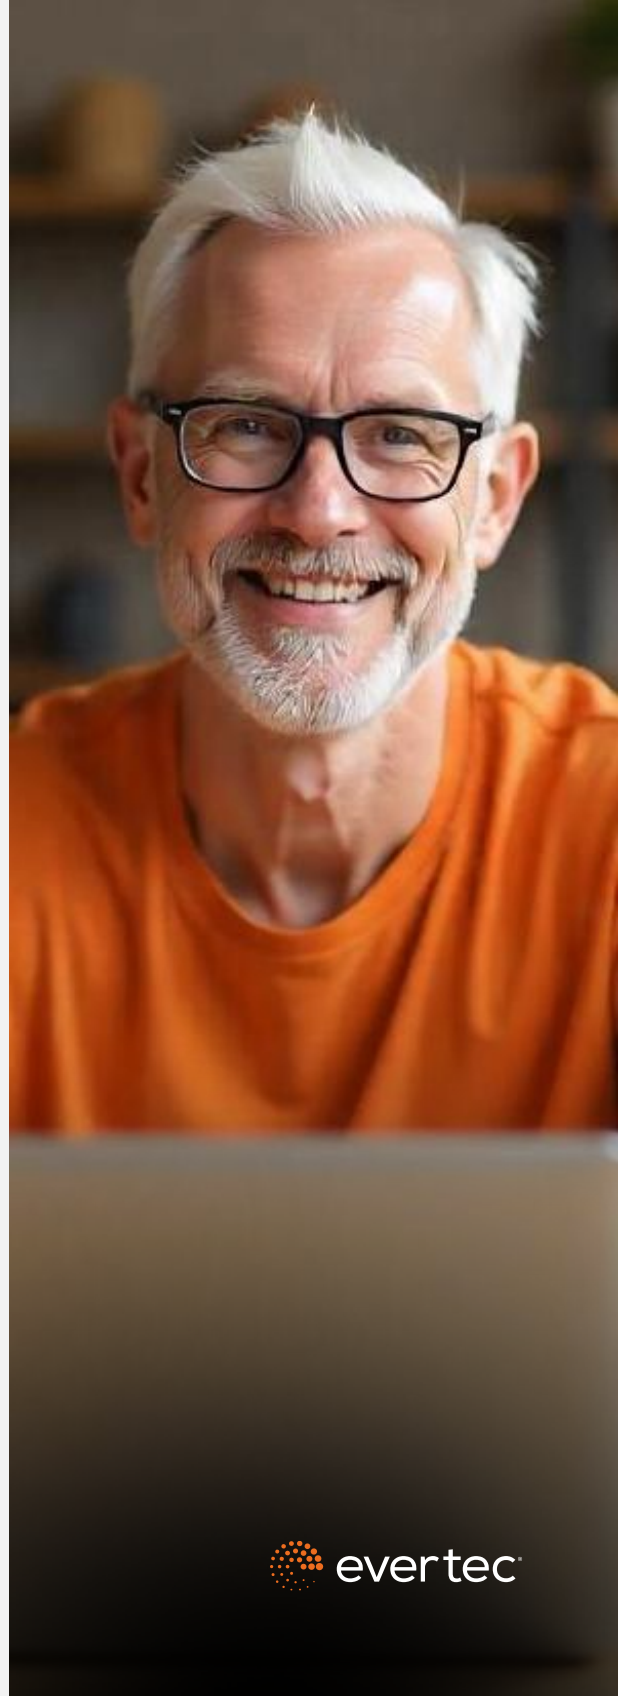

- ✓ **Reduce fraud and losses in digital** payments through advanced cardholder authentication.
- ✓ **Apply intelligent real-time** authentication based on the risk of each transaction.
- ✓ **Protect payments** without interrupting the checkout process.
- ✓ **Reduce chargebacks**, disputes, and operational costs in digital payments.

3DS ACS

Advantages that strengthen your business

- ✓ **Protect eCommerce payments** with robust authentication
- ✓ **Analyze the risk of each transaction** to prevent fraud
- ✓ **Improve conversion** with frictionless flows (reduce abandonment by up to 70%)
- ✓ **Comply with standards** such as EMV 3DS and PCI DSS
- ✓ **Offer flexible authentication** with OTP and biometrics

3DS ACS

 evertec

• The ACS is part of the issuer's domain within the 3DS ecosystem.

It connects through the card schemes and their technical components (DS). It integrates with your CMS (**Card Management System**) or with your validation systems to authenticate the cardholder.

How 3DS authentication and authorization work

Technical sheet

→ Key features

- Compliant with version 2.3.1
- Configure authentication rules by issuer
- Support methods such as OTP, biometrics, and codes via SMS or email
- Manage frictionless and challenge flows to balance security and user experience
- Generate and process authentication messages
- Securely store results for audit and analysis purposes
- Supports Visa, Mastercard, Discover, and ELO cards

Technical sheet

→ Security

- Uses advanced encryption with keys generated in certified device and cloud HSMs
- Protects physical access to data centers
- Performs security testing, scanning, and vulnerability management
- Safeguards sensitive data against unauthorized access

→ Benefits for the issuing bank

- Reduce fraud in online payments
- Decreases chargebacks through successful authentications
- Enhances the customer experience with frictionless flows for low-risk transactions
- Complies with international regulations and facilitates audits
