

Token Requestor

More security.

More approvals.

Less friction in every transaction.

A background image showing a hand holding a white card over a payment terminal. The card has a small chip on the top right. The terminal has a screen and several buttons, including '10%', '4 5H', '7 8H', and 'F'.

• Token Requestor

Protects card data through tokenization, replacing sensitive information in every transaction.

Integrates with multiple brands through a single connection and complies with standards such as EMVCo.

Compatible with advanced authentication methods such as EMV 3DS and Passkeys.

Security that powers every transaction

Secure tokenization: replaces sensitive data with unique tokens for maximum protection.

Advanced authentication(3DS): strengthens security in digital transactions.

Automatic credential updates: prevents declines due to outdated data.

Multi-brand compatibility: supports multiple brands through a single integration.

Serverless architecture: dynamically scales with your volume.

Open standard: enables interoperability across the payments ecosystem.

Token Requestor

Addressing key business challenges

- ✓ **Avoids declines** caused by outdated credentials.
- ✓ **Reduce costs**, minimizes errors, and prevents penalties from card brands and payment schemes.
- ✓ **Optimizes the authorization** and approval flow.
- ✓ **Secure management** of third-party tokens.
- ✓ **Improved user experience** with reduced payment friction.
- ✓ **Less digital fraud** and stronger regulatory compliance.
- ✓ **Operational agility and scalability** with serverless architecture and multi-brand compability.
- ✓ **Technical flexibility:** API for enrollment, cryptograms, token management, and notifications.
