

Issuer Processing

Control, manage, and enhance the issuance of payment methods from a single solution.

A man with a beard and short hair, wearing a dark suit jacket over a white t-shirt, is sitting at a desk. He is looking down at a laptop in front of him, with his hands on the keyboard. The background is a blurred office environment with large windows.

• Issuer Processing

Manages efficiently and securely the entire lifecycle of card transactions, from authorization to settlement.

Through a robust and scalable platform, it enables modern payment experiences, optimizes operations, and allows you to quickly adapt to new demands in the digital ecosystem.

**Multi-product issuing
on a single platform**

**Regional infrastructure
with global standards**

**Security integrated
from the design stage**

**Open APIs for agile
integration**

A solution that makes a difference

- ✓ **Integrated processing** of debit, credit, prepaid, and digital card products.
- ✓ **Real-time authorization** with integrated risk engines for fraud prevention.
- ✓ **Native integration** with tokenization, 3DS, and advanced authentication.
- ✓ **Scalable** and highly available cloud architecture.
- ✓ **Regulatory compliance** aligned with international standards.
- ✓ **BIN Sponsorship** that enables the issuance and operation of financial products under a regulated framework.

Advantages designed to strengthen your business

- ✓ **Reduces risk and losses** through integrated fraud and authentication controls.
- ✓ **Optimizes operational costs** with centralized and modular infrastructure.
- ✓ **Enhances the cardholder experience** with agile and secure processes.
- ✓ **Enables regional expansion** with country-adaptable models.
- ✓ **Transactional switching** through routing of authorizations for purchases, cash withdrawals, cashback, usage controls, among others

Issuer Processing

Solutions for issuers and financial institutions, with integration into the payments ecosystem

Solution components

Core issuing

Manages the full lifecycle of the payment instrument.*

Authorization & Switching

Processes domestic and international transactions in real time.

Security & Fraud Prevention

Integrates RiskCenter360, Scudo, 3DS, and tokenization.

Tokenization & Digital Credentials

Supports tokens, wallets, and digital payments.

APIs & Integrations

Facilitates integration with fintechs, banking cores, and technology partners.

* Availability may vary by country.

Technical sheet

→ Architecture:

- Operates on scalable, highly available cloud technology
- Features a multi-country regional infrastructure
- Incorporates a modular and adaptable design

→ Security:

- Integra motores de prevención de fraude
- Soporta EMV
- Incorpora tokenización
- Integra 3DS

→ Procesamiento:

- Ejecuta autorizaciones online y *batch*
- Realiza *switching* transaccional
- Administra límites y perfiles de uso

→ Integraciones:

- Uses REST APIs
- Connects local and international networks
- Integrates digital wallets and payment ecosystems

Technical sheet

→ SaaS:

- Operates on a 100% Azure cloud-based platform

→ Multi-product:

- Issues credit, debit, and prepaid products, both physical and virtual

→ Multi-issuer:

- Hosts and services multiple issuers on a single platform

→ Multi-currency:

- Supports operations in multiple currencies to enable regionalization

Modular services

For the management of the full lifecycle of card programs:

- Manages account origination and onboarding
- Issues physical and virtual credit, debit, and prepaid products
- Generates and validates security elements
- Manages financial and operational services for cardholders
- Manages point-based loyalty programs
- Generates and sends notifications via SMS, email, and push
- Handles clearing and settlement of local and international transactions
- Generates account statements
- Validates cryptographic elements such as PIN, CVV, CVV2, dCVV, and ARQC responses
- Authorizes transactions through configurable rules
- Performs transactional switching for purchases, withdrawals, cashback, and usage controls
- Monitors transactions and analyzes alerts for suspicious behavior
- Manages dispute and chargeback processes
