

Integrations

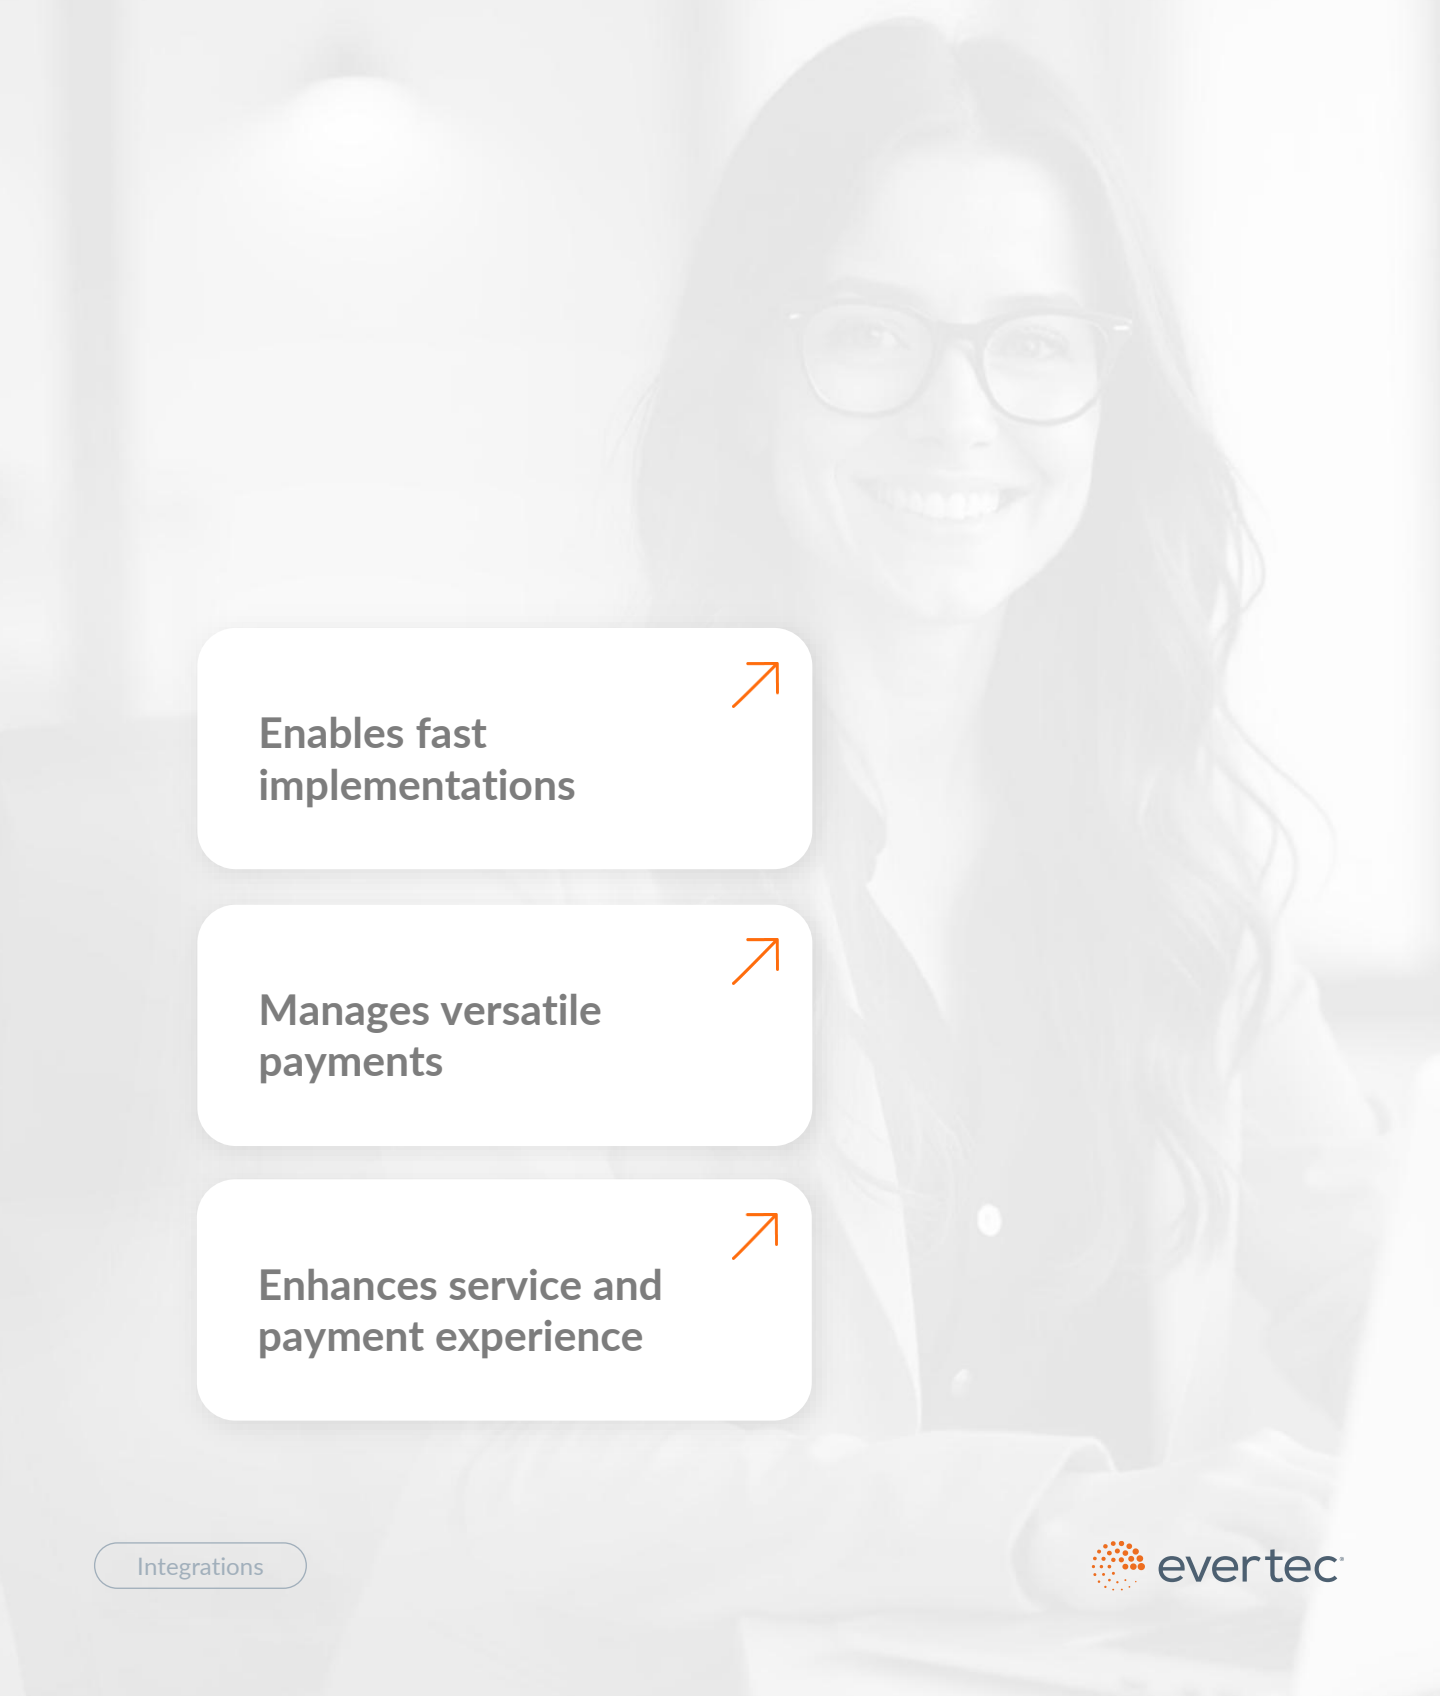

Payments solution that
integrates seamlessly with
merchants without affecting
their current operations.

• Integrations

Integrates POS systems with various payment capture methods such as Pin Pads, POS terminals, QR codes, and more, without modifying the core setup.

It streamlines implementation, enhance operations, and delivers a modern, secure, and flexible payment experience.

**Enables fast
implementations**

**Manages versatile
payments**

**Enhances service and
payment experience**

Integrations

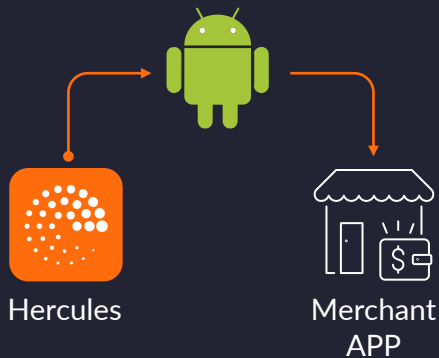

A solution that makes a difference

- ✔ **Efficiency and speed in payment capture.** Processes transactions quickly and reliably, reducing checkout wait times and improving the customer experience at every point of sale.
- ✔ **Centralization of information.** Consolidates all transaction data into a single platform, enabling better control, traceability, and real-time decision-making.
- ✔ **Certification with leading brands.** Complies with the standards of the industry's leading brands, ensuring security, compability, and trust in every transaction.

SDK Integration "App-in-app"

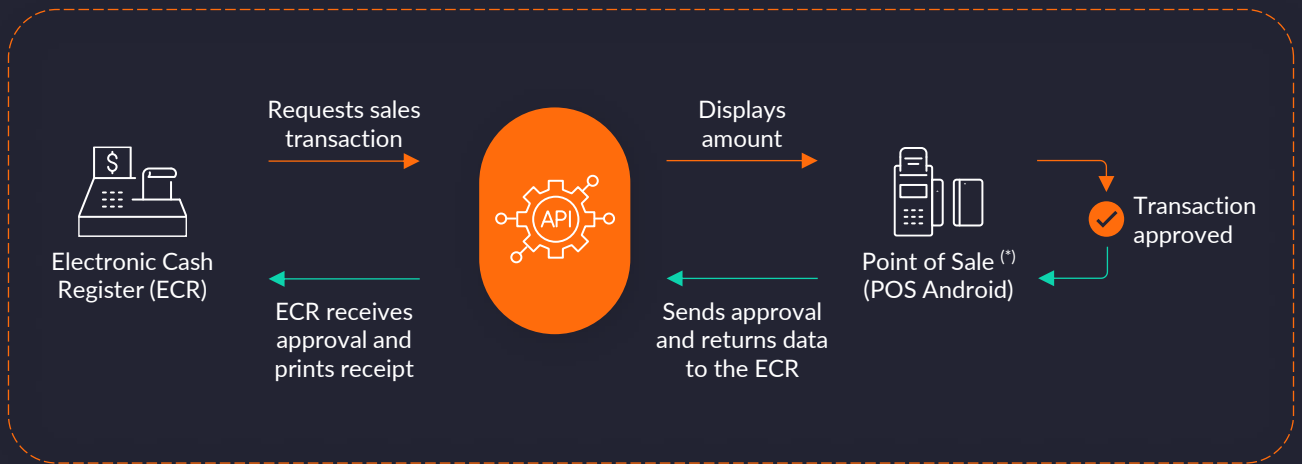

Integrates the merchant application and Evertec's payment application on the same POS device through an Android library that enables seamless communication between both.

API Integration

Connects the Electronic Cash Register (ECR) with Android POS terminals via APIs.

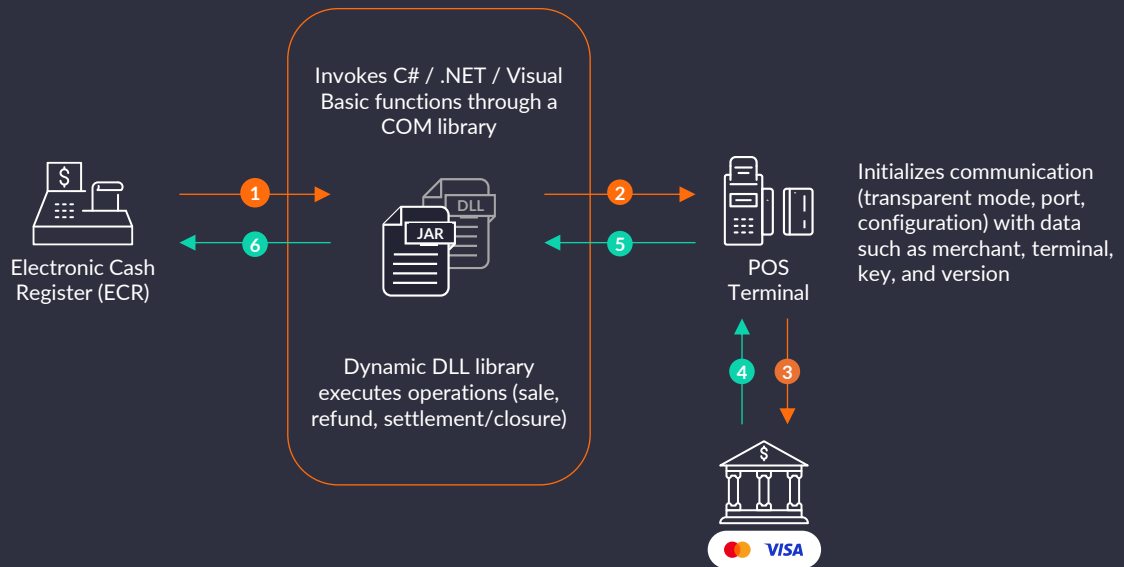

- Enables secure financial transactions
- Operates across multiple operating systems and programming languages.

DLL Integration

Integrates a DLL or JAR library into the POS system.

- Executes financial transactions from the register to the bank
- Supports multiple transaction methods from the existing system

MDB Integration

MDB Protocol
(Multi-Drop Bus)

- Performs product selection and payment within the same flow
- Allows products to be dispensed after payment

Use Cases

→ Integration approach by type

- SDK (Software Development Kit)
- Enables an integrated and controlled experience, such as apps, POS, or SoftPOS
- Provides a smooth and consistent user interface
- Reduces development time → faster time-to-market

Value: speed + better user experience

→ API (Application Programming Interface)

- Ideal for flexible and scalable integrations
- Connects multiple channels: web, app, back office
- Supports eCommerce, marketplaces, and omnichannel models

Value: scalability + customization + future growth

→ DLL (Installed library)

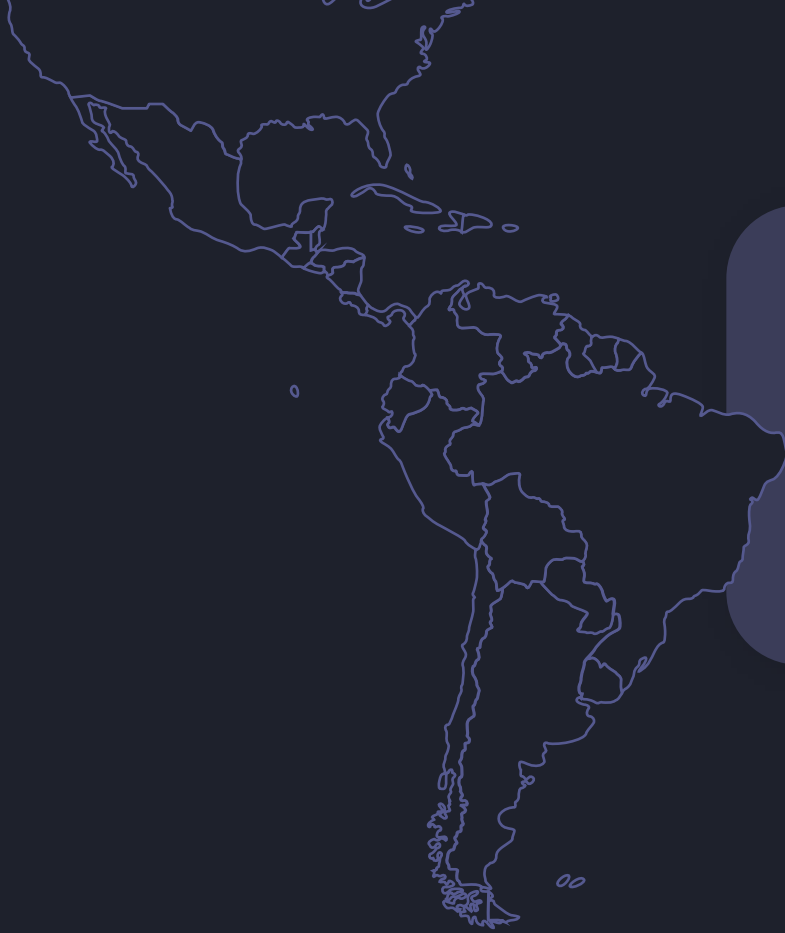

- Works with desktop software or existing systems
- Avoids changing platforms that already work
- Adapts to corporate environments and critical operations

Value: operational continuity + low impact of change

→ MDB / Local database

- Works in offline environments or with limited connectivity
- Stores and processes transactions locally
- Used in remote retail (vending machines), transports, or events

Value: resilience + uninterrupted operation

Regional presence

- Colombia
- Costa Rica
- Puerto Rico

**We serve acquirers, merchants,
and large retail chains.**
