Managed Cybersecurity (MSSP)

Solution designed to protect critical systems, sensitive information, and operational continuity in the face of an increasingly sophisticated threat landscape.

Evertec combines people, processes, and technology to prevent, detect, respond to, and recover from cybersecurity incidents, enabling organizations to operate with confidence and focus on their business objectives.

MSSP

**Continuous protection against
cyber threats**

**Compliance with standards and
regulations**

**Timely detection and response to
incidents**

**Operational continuity and risk
reduction**

MSSP

A solution that makes a difference

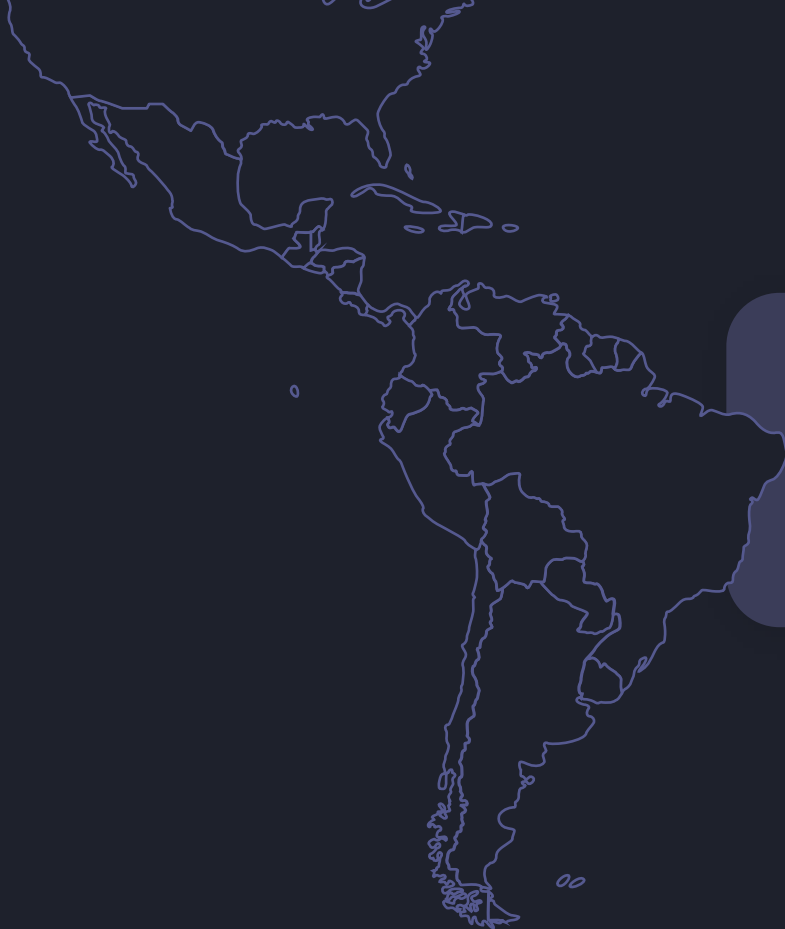

- ✓ **Security monitoring** from a Security Operations Center (SOC / V-SOC).
- ✓ **MSSP model** that integrates technology, processes, and certified experts.
- ✓ **Early detection** and effective response to security incidents.
- ✓ **Comprehensive coverage** for infrastructure, applications, data, processes, and users.

MSSP

Benefits that strengthen your business

- ✓ **Lower operational risks:** helps prevent attacks before they impact operations.
- ✓ **Greater visibility:** provides a centralized view of the organization's security posture.
- ✓ **Effective response:** reduces detection, analysis, and incident mitigation times.
- ✓ **Trust and compliance:** aligned with international standards.
- ✓ **Governance:** offers advisory support to strengthen security strategy and planning.

Solution components

Cybersecurity assessment

- Maturity
- Identification of breaches and critical assets in cloud and on-premise

Identity and access protection

- Multifactor authentication (MFA)
- Access control and configuration hardening

Vulnerability management

- Continuous internal and external scanning
- End-to-end management of identification, prioritization, and remediation

Email and device security

- Optimization of Microsoft 365 security tools
- Risk alerting
- User behavior analysis

Threat simulation and penetration testing

- Simulation of real attacks
- Testing across networks, web applications, and APIs

Monitoring and response

- Detection, analysis, and incident response
- Centralized visibility and reporting
- Threat hunting

Ficha técnica

Recovery

- Managed backup and DRaaS
- Backup for Microsoft 365
- Ransomware protection
- On-premise and cloud recovery
- Periodic restoration testing

Prevention and protection

- Vulnerability management
- Awareness programs
- Multifactor authentication (MFA)
- Penetration testing
- Phishing simulations
- Social engineering assessments
- Strategic assessments
- Patch management

Detection and response

- 24/7 monitoring with real-time analysis
- Event and incident management
- Managed services for firewalls, WAF, SASE, SD-WAN, EDR
- Comprehensive protection of endpoints, core systems, servers, web portals, and APIs
- Microsegmentation and granular control
- Integrated threat intelligence
- Automated alerts and response support

Governance and compliance

- Allignment with PCI DSS, SOC, CIS, NIST, FFIEC, HIPAA, and GLBA
- Centralized policy management
- Advisory on policies and audits
- Compliance reporting
