

Monitoring Tool

Operations Bridge

Monitor your network. Detect incidents.
Resolve faster.

A single platform for transaction análisis,
availability, and incident management.

A grayscale background image of a woman with long dark hair, wearing a light-colored long-sleeved shirt and jeans, standing at an ATM. She is holding a card and looking at the screen. The image is faded to allow text to be overlaid.

Operations Bridge

Access the performance of your entire ATM fleet in one place.

Access reports and insights from the data analytics engine whenever you need them.

Advantages that strengthen your business

Near Real-Time:

Detect end-to-end failures and resolve incidents faster by tracking each transaction throughout its lifecycle.

Improve operational efficiency:

Better coordinate your field technicians and accurately track SLA compliance.

Enhanced security:

Control platform access and protect operations from a single point.

Why Operations Bridge?

Continuous monitoring:

Detect exceptions and anomalies in real time and act before they impact service.

Faster incident management:

Restore ATM operations with automated ticketing and minimal business disruption.

Make informed decisions:

Configure rules, validate trends, and analyze transactional metrics minute by minute.

Regional presence

- Colombia
- Costa Rica
- El Salvador
- Virgin Islands
- Mexico
- Puerto Rico

Trusted by leading organizations using Operations Bridge

DAVIVIENDA

We serve banks, cooperatives, savings institutions, and financial companies.

Operations Bridge

2000+

ATMs under our management

30+

Out-of-the-box transactions

90 +

ATM clients across Latin America, the Caribbean, and Puerto Rico

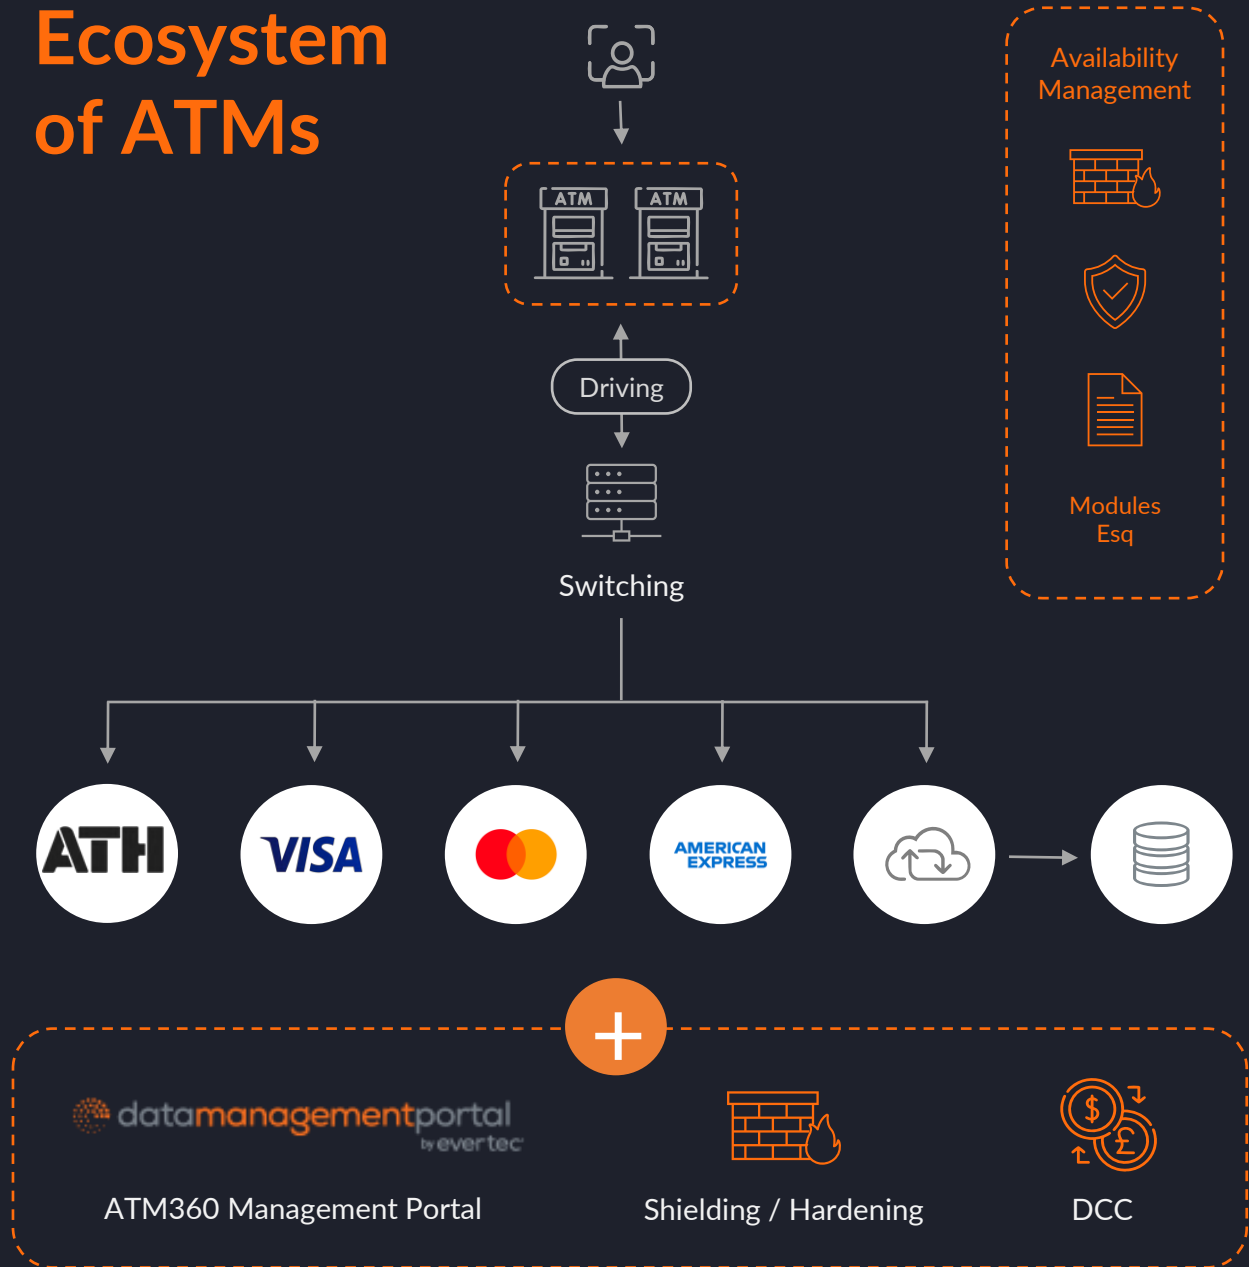

- PA-DSS certified
- Members of the PCI Council.
- Connectivity with Visa, Mastercard, and AMEX

A woman with long dark hair and glasses is smiling while sitting at a desk with a laptop. The image is darkened to serve as a background for the text.

Real-time monitoring

Detect alerts
instantly and reduce
downtime.

Ecosystem of ATMs

Monitoring Tool OB Modules

Monitoring

SSTOB Monitoring

Monitor system status and transactions in real time

RBAC

RBAC UAM Application to manage users, groups, roles, and more

User roles and permissions

RMM Agent

Extended monitoring at the ATM level

Report Portal

Access and edit reports by category and time period

ATMTA

ATM Transaction Analyzer

Filter, search, and export transactions

DA

Data Analyzer

Analyze and export data, visualize dashboards, and execute searches

IMS

Incident Management System

Incident monitoring and management

Technical sheet

Module - RBAC

Protect your operations with access control

→ Features

- View users by entity
- Review last login activity
- Manage security groups and permissions
- Assign roles by user

→ Benefits

- Ensure the right access based on each user's role
- Detect patterns and anomalies through access auditing
- Simplify role management at the group level

Technical sheet

Module - Monitoring

Monitor your network and act instantly

→ Features

- Monitor status and transactions in real time
- Receive immediate alerts for incidents
- Reduce downtime
- Download reports on demand
- Use a simple, intuitive interface

→ Benefits

- Anticipate failures with real-time alerts, notifications, and dashboards
- Operate your way with customizable views based on your needs
- Restore service faster by executing commands on specific terminals

Technical sheet

Module - ATMTA Data Edge Evolution

Find and analyze key transactions in seconds

→ Features

- Customize views and columns based on what you need to analyze
- Visualize critical data such as response times and status codes
- Apply simultaneous filters across columns and operators
- Export results for further analysis and tracking

→ Benefits

- Access precise information within the time frame you choose
- Act near real time with up-to-date data
- Reduce noise by focusing only on what matters for your operation

Technical sheet

Module - Data Analyzer

Turn data into decisions, in real time

→ Features

- Integrate data from multiple sources in a unified view
- Connect to core databases for analysis and visualization
- Explore dynamic dashboards with automatic updates
- Perform in-depth analysis with interactive visualizations

→ Benefits

- Respond faster by identifying with real-time information
- Anticipate deviations with automated threshold-based alerts
- Optimize operations with immediate access to historical data and statistics

Technical sheet

Module - Report Portal

Clear reports for strategic decision-making

→ Features

- Export Excel-compatible reports (pivot tables, formulas, and functions)
- Run reports manually or on a scheduled basis
- Analyze operational and business historical data
- Control access through security groups (RBAC)

→ Benefits

- Save time and effort with simple, automated processes
- Improve decision-making with the information you need, when you need it
- Easily interpret data with clear, detailed visual reports

Technical sheet

Module - IMS (Incident Management System)

Clear and efficient incident management

→ Features

- View incidents and detailed information in one place
- Quickly prioritize using clear flags and indicators
- Search incidents by criteria (priority, terminal, or location)
- Analyze historical data and manage tickets with filters, notes, and assignments

→ Benefits

- Understand each incident immediately and track its evolution
- Configure views based on your operation and work with the data that matters
- Accelerate response times with automated incident notifications and assignments

Technical sheet

RRM Agent

Extend monitoring with remote control of the ATM

→ Features

- Install an agent on the ATM for extended monitoring
- Access the remote desktop
- Browse files
- View the ATM screen
- Download journals manually or on a scheduled basis
- Store journals in a secure repository with PCI controls

→ Benefits

- Reduce field visits by diagnosing and taking action remotely
- Accelerate investigations with readily available and protected journals
- Enhance security by centralizing evidence and access under controlled environments

Access the network monitoring tool

Use OB modules to manage users, search transactions, analyze data, and handle incidents from a single platform.
